

BECOME AN HVAC TECHNICIAN!

ABOUT THE PROGRAM

The heating, ventilation, air conditioning and refrigeration (HVAC) program prepares students for a technical service career in residential or light commercial/industrial environmental systems.

YOU WILL LEARN

Student will learn the mechanical and electrical/electronic systems involved in contemporary environmental controls.

ABOUT THE INDUSTRY

An HVAC Technician knows electrical theories and concepts. The training also involves learning about electrical wiring, motors, systems, test meters and troubleshooting. Students typically learn about how to work equipment. They can gain the skills to install, maintain and repair most systems.
